

Scope

Net Technologies has recognized the need of a fast and reliable tool to estimate the cost of network operations. To support TETRA/TETRAPOL network owners, we developed and offer an Operations Cost Estimation Tool (OCET). OCET developed for estimating the cost of operation of a TETRA/TETRAPOL network. The tool allows fast but accurate estimation based on predefined estimation templates (managed by system advanced users) with minimum user input.

OCET Key Features and benefits

- Save estimation templates and use them in future estimations.
- Estimations can be saved for future reference of modifications.
- Predefined roaming models.
- More than 13 cost segments for estimation templates.
- Minimum user input.
- Allowing keeping control of the user access rights with Manage Users functionality.
- Detailed results screen.
- User can define deferent estimation areas and use different template per area.
- Content Management for estimation instructions ore any other relevant material.
- Architecture that will allow adding theoretically unlimited estimate templates, estimates and users.
- Friendly Graphical User Interface (GUI).
- Web based application for easy access from anywhere anytime (PC, tablet, etc.).

- + 1. Maintenance of equipment and components
- + 2. Equipment and component licenses, maintenance outsourcing
- + 3. Customer Provisioning
- + 4. Customer Care, Charging and billing Costs
- + 5. Service Management Costs
- + 6. Network Management Costs
- + 7. Network Optimization
- + 8. Rental of physical network resources (including licenses)
- + 9. Roaming
- + 10. Interconnections (ISI Gateway)

You may add up to 10 cost sections

Section 1

Cost Template: Template 1

Area Type: Rural

Number of Users:
[If you leave this field empty or 0, this section's settings/cost will not be saved/calculated]

Number of TBSs:
[If you leave this field empty or 0, this section's settings/cost will not be saved/calculated]

Section 2

Advantages

- Simple to use
- No preliminary adjustments are needed.
- Save templates once and use them anytime in estimations
- Minimum User input
- User can define up to 10 different estimation sections using combination of different templates
- Detailed results screen
- Save estimations for future reference
- Integrated content and user management
